SYNTHETIC

OFFICE NOTE
Date of visit: 2026-10-18
Patient: Riley Okonkwo

History: left leg pain for 8 weeks, into the foot.
Care: naproxen plus physical therapy for 6 weeks.
Those 6 weeks did not produce meaningful relief.
Baseline pain score: NRS 8/10.
Baseline function score: ODI 46.

Exam: positive left straight-leg raise.
Decreased sensation on the dorsum of the left foot.
History, physical, and neurological exam are in this note.

Assessment: left L5 radiculopathy, M51.16.
Plan: initial CPT 64483, left L5 transforaminal injection.
This is not a repeat injection.

SYNTHETIC

IMAGING REPORT
Modality: MRI lumbar spine without contrast
Date: 2026-09-02
Patient: Riley Okonkwo

Findings: left paracentral L4-L5 herniation.
The herniation contacts the traversing L5 nerve root.
Moderate left foraminal stenosis at L4-L5.
Concordant with the left L5 radicular exam.
